Delivering Performance Improvement to Your Enterprise

Six Sigma Qualtec

Why Bring Six Sigma to our Company?

General Electric, one of the most successful companies deploying Six Sigma, estimated benefits around \$10 billion in the first five years.

GE began Six Sigma in 1995 after Motorola and Allied Signal blazed the Six Sigma trail. Since then, thousands of companies around the world have discovered the far-reaching benefits of Six Sigma. They can increase quality, cut costs, and improve their key tasks in gaining and keeping customers.

Does it Really Save Money?

Six Sigma Black Belts save companies around \$230,000 on each project and can complete 4 to 6 projects a year (According to iSixSigma, an industry-wide information clearing house).

What's the ROI?

Client-measured Return on Investment (ROI) is between 3:1 to 30:1. Seen as 'interest', ROI tops a 300 to 3000 percent return – that is a three-times to thirty-times return – and all in about 6 months.

What is the Cost of Training?

In most deployments the savings and ROI from the first wave of Black Belt projects pay for training several times over – and within one financial year.

Who and Where is Six Sigma Qualtec?

Throughout the industries it serves, Six Sigma Qualtec is respected for its training programs for thousands of Six Sigma Black Belts. These are men and women who design and implement the business improvement programs and deliver quantifiable improvements in financial performance and product quality.

Six Sigma Qualtec is one of the original firms that started the Six Sigma revolution. For more than a decade, our practitioners have been involved in building ground-floor process improvement and Six Sigma initiatives at world-class companies. Our professionals are experienced, respected and accomplished in their fields for possessing and transferring the know-how to produce proven results.

SSQI headquarters in the USA are Princeton, NJ and Tempe, Arizona; with dedicated satellite offices throughout North America, Europe and Asia.

WHAT IS SIX SIGMA?

Six Sigma is a measure of quality that strives for near perfection – fewer than 3.4 defects per million. It is a disciplined, data-driven approach and methodology for reducing defects in any process from manufacturing to a service transaction. Six Sigma originated in manufacturing. Since then it has proven successful in service industries including healthcare and financial services.
