

SixNet Intelligence System

The Smart Way To Manage Your Six Sigma Investment

Does Your Project Management System...

Guarantee Executive Commitment

- **Report alignment of program to corporate strategy and scorecards**

Strong executive commitment is of paramount importance when implementing any performance improvement program. SixNet guarantees leadership commitment by aligning and reporting results using your current corporate measures and strategic initiatives.

Replicate Best Practices

- **Capture knowledge to use throughout your organization**

Having a way to capture best practices and then replicate those throughout your organization results in faster completion of projects and a higher return on investment. SixNet logically stores all projects, allowing employees to conduct full text search of the project and attachments to replicate them within their area of responsibility. As projects are completed, configured e-mail messages are produced and sent to key leaders, who are likely to value from a similar project.

Track Your Projects Enterprise-Wide

- **Track all corporate-wide improvement methodologies within a single system**

All companies have a variety of unconnected improvement activities being implemented at any point in time. SixNet enables any performance improvement program to be tracked within a single system, providing guidance and templates to all of your users. This includes programs such as: LEAN, Six Sigma, Sarbanes Oxley, Merger & Acquisition, DFSS, and IT Development.

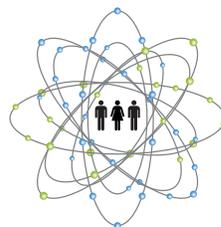

Delight Your Users

- **User friendly interface ensures high usage**

Having the best tool in the world provides no value, unless it's used. SixNet has been developed with direct input from over 40 clients. This voice of the customer input has helped build a system that users find simple to navigate and realizes immediate value. This logical flow ensures fast adoption by your teams.

Why Customers Select SixNet...

Fast, Easy Implementation

- **No customization; ready to use in 48 hours.**

Expensive customization not only drives cost up while slowing implementation, it also creates significant problems associated with future upgrades and enhancements. SixNet has been developed from the ground up using a .Net platform to be completely configurable by the user. This results in a system that is immediately ready to use and easily aligned to your approach to performance improvement.

Complete Management System

- **Easily manage complex improvement programs**

Managing all the moving pieces of performance improvement programs is a daunting task. SixNet removes complexity, allowing you to plan rather than react changes, schedule resources, effectively communicate and reduce the risk associated with improvement programs.

One Global Application

- **Web-based, multi-language, multi-currency application**

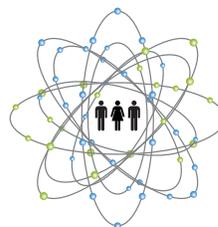

In our global economy team members need to participate on performance improvement programs regardless of geography. SixNet web-based application configures to local usage by dynamic translation into local language and currency. This creates global acceptance of single system by providing real-time data to anyone from anywhere in the world and reduces the complications associated with non-English-speaking employees.

IT Friendly

- **Completely secure; integrates with existing systems and no software required.**

Complete acceptance of any new application by your IT department is essential. SixNet provides an inexpensive high value program, with no concerns about incompatibility with your existing systems or with future version upgrades. Users log-on to a completely secure portal aligned to your requirements. This is accomplished without installing any software on users' computers and with no support required from your internal IT department.
